Bridge Clearance:

When approaching our marina you will pass Captains Cove Marina and then pass underneath the George Massey Tunnel Bridge.

Heights are limited so taller vessels should check the tide charts for your arrival and departure times. Using the Sand Heads Tide Information, an approximate 10 foot tide will usually allow 14 feet of clearance under the bridge however seasonal Fraser River discharge will vary clearances heights. Refer to Current Atlas - Juan de Fuca Strait to Strait of Georgia Page 200 – 211 for more details.

Water Depth:

Dockside depth at Zero (0) tide (Sand Heads Tide Charts) range from 5 – 15 feet.

Use caution when passing the Starboard Hand Buoy at the entrance to Captains Cove (Latitude: 49 06.913N / Longitude 123 04.928 W) as the water depth reduces quite rapidly abeam the marker due to the constant river flow. Recommend approaching the buoy at a reduce speed (idle) and expect depths of well less than 10 feet abeam the buoy in the lower tide ranges.
